

INFMATX 43 HW 3: UI Prototyping

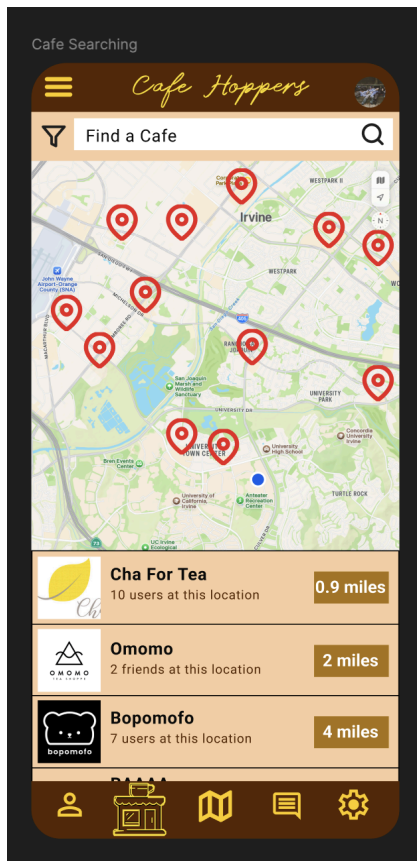

Here is where we describe each of the elements of our UI design and how it relates to Heuristic Evaluation

Home Page

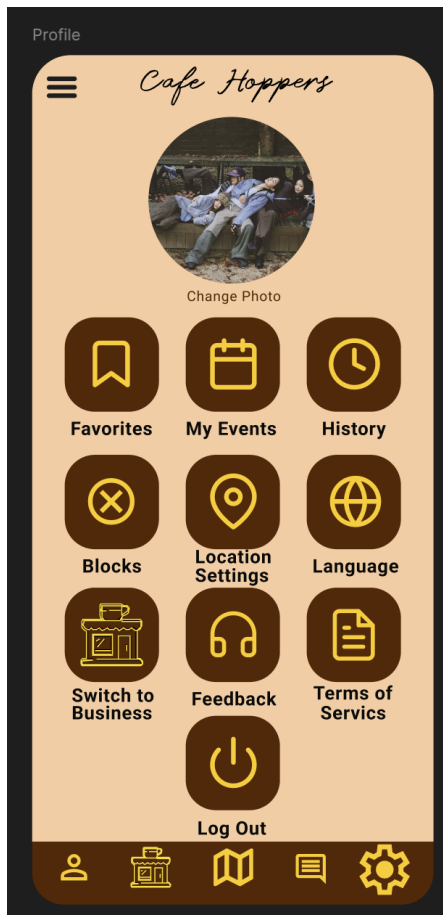

- Here is the home page where users can see all their options in the app and also see the locations of nearby friends and cafes
 - Users can scroll through the list in the bottom to see their friends' current activities
 - Friends will have a distance and also an activity tag to show if they are at a certain location. Friends can turn this off in settings
 - Home page is decorated with a consistent color theming and minimalist design so users will not be easily overwhelmed when entering the app
 - Users will always have access to the search bar above, and they can use the tabs below or the menu on the top right to access more options within the app
 - The bottom tab will have the icon enlarged to indicate that the user is at that page. The bottom panel is always present in the app so users can always click one of them to back out of anywhere
- Map will also function like a normal map app
- Filter button above to narrow search results

Cafe Searching

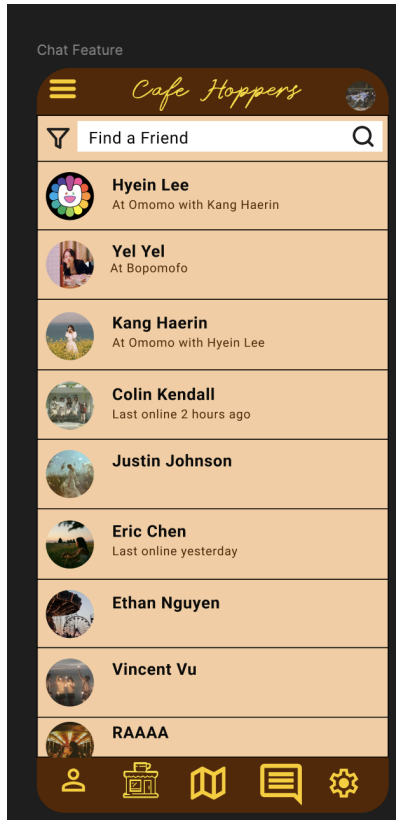

- For better searching purposes, users can go to the cafe tab as a shortcut to see nearby cafe's
- Users can still search above but the scroll menu below shows local cafes instead of friends
- Pretty much same layout as above to maintain consistency throughout the app

Profile Page

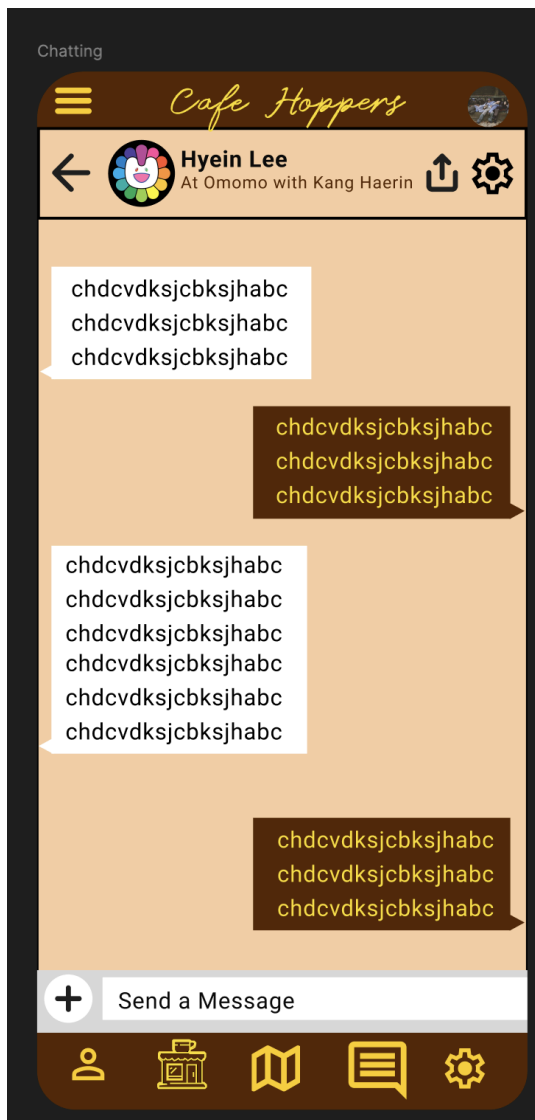

- The settings tab which houses all our other features that are not used as often
- Users can customize their profiles, look at past events/favorites, manage who they are blocking, and more
- Consistent color scheme + layout and buttons to match theming

Chat Page

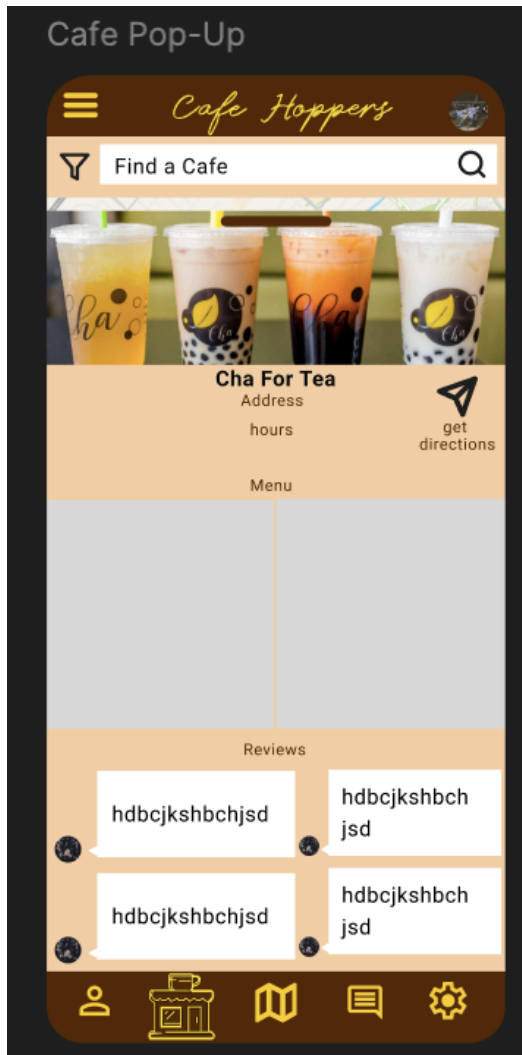

-
- Scroll to view past messages
- FORGOT TO ADD but will add a time feature so you can see when the last message you had with the person was
- Search bar above now lets you search for friends/users and also lets you filter them

Chatting

-
- Back arrow lets users go back to chatting page
- You can also click the bottom icons below to get out
- + icon allows to send photos + attachments
- Share + settings above

Cafe Icon

-
- This is a WIP of what the pop-up window for a cafe would look like
- It has that bar on top so users can press it and scroll down to get out
- Will have photos of the menu + reviews
- Also get directions option
